-------------------------------	------------------

NOTES:

- Brilliance and definition decrease with decreasing anode voltage. In general, anode voltage should not be less than 10,000 volts.
- Visual extinction of focused raster. Extinction of stationary focused spot will require that these values be about 5 volts more negative.

DIAGRAM NOTES:

1. Reference line is determined by JETEC No. 112 reference line gauge.
2. The plane through the tube axis and Pin No. 6 may vary from the plane through the tube axis and bulb terminal by an angular tolerance (measured about the tube axis) of $\pm 10^\circ$. Bulb terminal is on same side as Pin No. 6.
