PICTURE TUBE

11FP4

Rectangular Glass Type
Low - Voltage Electrostatic focus

Aluminized Screen
Magnetic Deflection

Toshiba 11FP4 is a 11 inch, directly viewed, rectangular, glass picture tube of the low voltage electro-static focus and 114° magnetic deflection type.

The 11FP4 employs short neck, no ion trap gun featuring good focus over entire picture area.

11FP4 has a aluminized screen and it maximum overall length is only 215 mm or 8.5 inch thus very suitable for portable T. V. Set.

GENERAL DATA

Electrical :

Heater voltage	6.3	V
Heater current at 6.3 Volts	450±22	mA
Heater warm up time	11	second
Direct interelectrode capacitance		
Grid No. 1 to all other electrodes	6	PF
Cathode to all other electrodes	5	PF
External conductive coating to ultor	{ 500 max. 300 min.	PF PF
Focusing method	Electrostatic	
Deflection method	Magnetic

Notes:

1. Brilliance and definition decrease with decreasing voltage of ultor to Grid - No. 1 voltage. In general the ultor voltage or ultor to Grid- No. 1 voltage should not be less than 8000 volts.
2. Individual tubes will have satisfactory focus at same value of Grid- No. 4 (or Grid - No. 4 to Grid No. 1) voltage between 0 and 400 volts with the combined bias voltage and video - signal voltage adjusted to produce an ultor current of 100 micro amperes.
3. Distance from Reference line for suitable P. M. centering magnet should not exceed 2-1/8. Excluding extraneous fields, the center of the undeflected focused spot will fall within a circle having a 5/16 inch radius concentric with the center of the tube face. It is to be noted that the earths magnetic field can cause as much as 7/16 inch deflection of the spot from the center of the tube face.

NOTES FOR DIMENSIONAL OUTLINE

Notes:

1. The plane through the tube axis and Pin No. 4 may vary from the plane through the tube axis and ultor terminal by angular tolerance of ± 30 degree. Ultor terminal is on the same side as Pin No. 4.
2. With tube neck inserted through flare end of reference-line gauge JEDEC G-126 and with tube seated in gauge, the reference-line is determined by the inter-section of the plane CC' of the gauge with the glass funnel.
3. Socket for this base should not be rigidly mounted it should have flexible leads and be allowed to move freely.
4. External conductive coating must be grounded.
