NOTE:

1. This tube is intended to be used in automotive service from a nominal 12 volt battery source. The heater is therefore designed to operate over the 10.0 to 15.9 voltage range encountered in this service. The maximum ratings of the tube provide for an adequate factor such that the tube will withstand the wide variation in supply voltages.

QUICK REFERENCE DATA

The Sylvania Type 12F8 is a double detector diode and remote cutoff pentode with a common cathode. The pentode was designed for service as an AF voltage amplifier where the potentials are obtained from a 12 volt automobile storage battery.
