SHARP-CUTOFF PENTODE

RCA Dark Heater
Frame-Grid Construction

For Video-Output Amplifier Service
in Color-TV Receivers

$g_m = 32000 \mu\text{mhos}$
 $P_b = 10 \text{ watts}$

RCA-12HG7 is a frame-grid type sharp-cutoff pentode in a T9 envelope utilizing a large-button neonoval 9-pin base. This type is especially useful as a video-output amplifier tube in color-TV receivers.

The 12HG7 incorporates a special large-area plate structure which, in combination with the T9 envelope, provides a dissipation capability of 10 watts. Because of this high dissipation capability, it is possible to eliminate a series plate-circuit dropping resistor and its associated bypass capacitor in new-equipment circuit designs.

The frame-grid construction of the 12HG7 provides an exceptionally high value of transconductance (32000 μmhos). This tube also features a plate current characteristic with controlled knee to provide good linearity at relatively low plate voltage.

The 12HG7 utilizes an RCA Dark Heater to provide long and dependable performance.
