NOTES:

1. External conductive coating must be grounded.
2. Brilliance and definition decrease with decreasing anode voltage. In general, the anode voltage should not be less than 9,000 volts.
3. Visual extinction of undeflected focused spot.
4. For JETEC Focusing Coil No. 106 positioned with center line of air gap $3\frac{1}{4}$ inches from reference line (See Outline Drawing). The indicated current is for condition with combined Grid No. 1 bias voltage and video signal voltage adjusted to produce a highlight brightness of 35 foot-lamberts on a $10\frac{1}{2}" \times 7\frac{3}{4}"$ picture area, and sharply focused at the center of the screen.
5. The center of the undeflected, unfocused spot will fall within a circle having 20 mm radius concentric with the center of the tube face.

WARNING:

X-ray radiation shielding may be necessary to protect against danger of personal injury from prolonged exposure at close range if this tube is operated at higher than the manufacturer's Maximum Rated Anode Voltage or 16,000 volts, whichever is less.

DIAGRAM NOTES:

1. Reference line is determined by plane of upper edge of JETEC No. 112 reference line gauge, when the gauge is seated against the bulb.
2. Vacant pin position No. 3 aligns with anode contact cap (J1-21) within 30 degrees.
