Grid n°2 current	-15 to +15 ua
Grid n°4 to grid n°1 voltage	0 to 400 volts

Note 1 - The plane through the tube axis and pin 4 may vary from the plane through the tube axis and anode terminal by angular tolerance (measured about the tube axis) of $\pm 30^\circ$. Anode terminal is on same side as pin 4.

Note 2 - Socket for this base should not be rigidly mounted; it should have flexible leads and be allowed to move freely. The design of the socket should be such that the circuit wiring cannot impress lateral strains through the socket contacts on the base pins. Bottom circumference of base wafer will fall within a circle concentric with bulb axis and having a diameter of $1.3/4$ ".

Note 3 - Width of undisturbed region between sold-match line and splice line is $3/4$ " minimum. This should be the maximum width of tube support band.
