DESCRIPTION AND RATING

The 21XP4-A is an electrostatic-focus and magnetic-deflection, direct-view all-glass picture tube which provides a 17- by 12¾-inch picture for television applications. The electron gun has a focusing voltage range of -0.4 to $+2.2$ percent of the anode voltage and is used with an external single-field ion-trap magnet. Other features of this tube include a high quality gray faceplate which increases picture contrast and detail under high-ambient-light conditions, a reflective aluminized screen to increase light output, and a space-saving rectangular face shape. An external conductive coating serves as a filter capacitor when grounded.

MAXIMUM CIRCUIT VALUES

*The maximum ratings provide a ten percent safety factor in accordance with the standard design-center system of rating cathode-ray tubes. The tube will withstand the combined effects of variations in line voltage and components provided the maximum design-center values are not exceeded by more than ten percent.

†Anode, grid-No. 3 and grid-No. 5 which are connected together within the tube are referred to herein as anode.

If this tube is operated at voltages in excess of 16,000 volts, x-ray radiation shielding may be necessary to avert possible danger of personal injury from prolonged exposure at close range. The protective face-viewing window of apparatus using tubes of this type may provide such a safeguard. If the radiation measured in contact with this window does not exceed 6.25 milliroentgens per hour, the window will normally provide adequate protection.

‡At design-center maximum anode voltage plus ten percent.

§Cathode should be returned to one side or to the midtap of the heater transformer winding.

πBrightness and focus quality decrease with decreasing anode voltage. In general, the anode voltage should not be less than 14,000 volts.

▲The focusing electrode may be modulated within the stipulated maximum range without damage to the tube.

♦For visual extinction of focused raster.

φSingle-field ion-trap magnet adjusted to optimum position, equivalent to 40 milliamperes through JETEC ion-trap magnet No. 117.

NOTES:

1. REFERENCE LINE IS DETERMINED BY THE PLANE OF THE UPPER EDGE OF THE REFERENCE-LINE GAGE (RETMA NO. 110) WHEN THE GAGE IS RESTING ON THE CONE.
2. APPROXIMATE POSITION OF ION TRAP MAGNET.
3. APPROXIMATE POSITION OF CENTERING MAGNET, IF USED.
4. DEFLECTION ANGLE ON DIAGONAL IS 70 DEGREES.
5. ANODE TERMINAL ALIGNS WITH PIN NO. 6 ± 30 DEGREES.
