NOTES:

1. Conductive Coating must be grounded.
2. Brilliance and definition decrease with decreasing anode voltage. In general, the anode voltage should not be less than this value.
3. Visual extinction of focused raster. Extinction of the stationary focused spot will require that these values be about 5 volts more negative.
4. For JETEC focusing coil No. 109 or equivalent 3 inches from reference line with the combined grid No. 1 bias voltage and video signal adjusted to produce a highlight brightness of 20 foot lamberts on a picture area of 24 $\frac{1}{4}$ x 18 $\frac{1}{2}$ inches.

DIAGRAM NOTES

1. Reference line is determined by the plane C-C1 of the reference line gauge (JETEC No.116) when the gauge is resting on the cone. The neck diameter near the cone may exceed 1.500" but is limited by the internal contour of the yoke reference line gauge.
2. Suggested mask opening.
3. Bulb contact aligns with vacant pin position No. 6 ± 30 degrees.

WARNING

X-ray radiation shielding may be necessary to protect against possible danger of personal injury from prolonged exposure at close range if this tube is operated at higher than the manufacturer's Maximum Rated Anode Voltage or 16,000 volts, whichever is less.
