33GY7-A

Compactron Diode-Pentode

The 33GY7-A is a compactron containing a high-perveance diode and a beam-power pentode. The diode is intended for service as the damping diode and the pentode as the horizontal-deflection amplifier in television receivers.

The 33GY7-A is unilaterally interchangeable with the 33GY7 and differs only in utilizing a dimple anode construction to minimize snivets.

GENERAL

ELECTRICAL

Cathode - Coated Unipotential

Heater Characteristics and Ratings

Heater Voltage, AC or DC* 33.6 Volts
 Heater Current† 0.45±0.03 Amperes
 Heater Warm-up Time, Average§ 11 Seconds
 Direct Interelectrode Capacitances, approximate¶

Diode Section

Cathode to Plate and Heater:

k to (p + h) 8.5 pf

Plate to Cathode and Heater:

p to (k + h) 5.2 pf

Heater to Cathode: (h to k). 3.2 pf

Pentode Section

Grid-Number 1 to Plate: (g1 to p). 0.2 pf

Input: g1 to (h + k + g2 + b.p.) 17 pf

Output: p to (h + k + g2 + b.p.) 7.0 pf

MECHANICAL

Operating Position - Any

Envelope - T-12, Glass

Base - E12-74, Button 12-Pin

Outline Drawing - EIA 12-56

Maximum Diameter. 1.563 Inches

Minimum Diameter. 1.437 Inches

Maximum Over-all Length 2.875 Inches

Maximum Seated Height 2.500 Inches

Minimum Seated Height 2.250 Inches

MAXIMUM RATINGS

Design-Maximum ratings are limiting values of operating and environmental conditions applicable to a bogey electron tube of a specified type as defined by its published data and should not be exceeded under the worst probable conditions.

The tube manufacturer chooses these values to provide acceptable serviceability of the tube, making allowance for the effects of changes in operating conditions due to variations in the characteristics of the tube under consideration.

The equipment manufacturer should design so that initially and throughout life no design-maximum value for the intended service is exceeded with a bogey tube under the worst probable operating conditions with respect to supply-voltage variation, equipment component variation, equipment control adjustment, load variation, signal variation, environmental conditions, and variations in the characteristics of all other electron devices in the equipment.

TERMINAL CONNECTIONS

- Pin 1 - Heater
- Pin 2 - Diode Plate
- #Pin 3 - No Connection
- Pin 4 - Diode Cathode
- Pin 5 - Pentode Plate
- #Pin 6 - No Connection
- #Pin 7 - Internal Connection
- Pin 8 - Pentode Cathode and Beam Plates
- Pin 9 - Pentode Grid Number 1
- Pin 10 - Pentode Grid Number 1
- Pin 11 - Pentode Grid Number 2 (Screen)
- Pin 12 - Heater

The tubes and arrangements disclosed herein may be covered by patents of General Electric Company or others. Neither the disclosure of any information herein nor the sale of tubes by General Electric Company conveys any license under patent claims covering combinations of tubes with other devices or elements. In the absence of an

express written agreement to the contrary, General Electric Company assumes no liability for patent infringement arising out of any use of the tubes with other devices or elements by any purchaser of tubes or others.

NOTES

- * Heater Voltage for a bogey tube at $I_f = 0.45$ amperes.
- ‡ The equipment designer should design the equipment so that heater current is centered at the specified bogey value, with heater supply variations restricted to maintain heater current within the specified tolerance.
- § The time required for the voltage across the heater to reach 80 percent of the bogey value after applying 4 times the bogey heater voltage to a circuit consisting of the tube heater in series with a resistance equal to 3 times the bogey heater voltage divided by the bogey heater current.
- ¶ Without external shield.
- # Socket terminals 3, 6, and 7 should not be used as tie points.
- Δ For operation in a 525-line, 30-frame television system as described in "Standards of Good Engineering Practice Concerning Television Broadcast Stations," Federal Communications Commission. The duty cycle of the voltage pulse must not exceed 15 percent of one scanning cycle.
- ** In stages operating with grid-leak bias, an adequate cathode-bias resistor or other suitable means is required to protect the tube in the absence of excitation.
- ‡‡ Applied for short interval (two seconds maximum) so as not to damage tube.
- §§ Triode connection (screen tied to plate) with $E_b = E_{c2} = 130$ volts and $E_{c1} = -22.5$ volts.
