NOTES:

- 1. Operation of Type 3AQP7 at Anode Voltages of less than 1000 volts is not recommended.
- 2. Visual extinction of undeflected focused spot.
- 3. Deflecting Plates 1-2 are nearer the screen.
- 4. Deflecting Plates 3-4 are nearer the base.
- 5. Useful scan to be centered with respect to the tube face.
- 6. With the tube shielded and all deflection plates connected to Anode No. 2. Limit square centered on tube face, with sides parallel to deflection axes.
- 7. The resistances in each deflecting plate circuit should be approximately equal.
