[□] Defined as the time interval between the point on the rising portion of the grid pulse which is 26 per cent of the peak unloaded-pulse amplitude and the point on the anode-current pulse which is 26 per cent of its peak amplitude. The anode-current pulse has a maximum time rise of 0.05 μ sec. The grid pulse has a minimum peak amplitude of 130 volts, a maximum rise time of 0.5 μ sec, and is supplied by a driver having a maximum internal impedance of 1500 ohms.

[•] Continuous Commercial Service.

[#] Corresponds to altitude of about 50,000 feet.

^{*} In applications where the anode voltage is applied instantaneously, the power-supply filter should be designed so that the peak forward anode voltage is applied at a rate not to exceed 75,000 volts per second.

[▲] Exclusive of spike not having more than 0.05 μ sec duration.

^o Averaged over any cycle.

[†] Defined as $\text{Peak Forward Anode Volts} \times \text{Pulse-Repetition Rate (pps)} \times \text{Peak Anode Amperes (excluding spike)}$.

* Pulse duration is defined as the time interval between points on the pulse envelope at which instantaneous amplitudes are equal to 70.7 per cent of the maximum amplitude excluding spike.

* Operation with a bulb temperature within the approximate range of 60° to 90° C measured on the bulb directly opposite the anode is recommended for longest life. To attain this temperature under operating conditions involving low ambient temperature, the use of a heat-conserving enclosure for the tube may be necessary.

OPERATING CONSIDERATIONS

The *anode* is brought out of the tube to a Small cap. The connector for this cap should be of the heat-radiating type and the connector lead should have ample current-carrying capability for the operating requirements.

Shielding of the 6130/3C45 should be provided if it is operated in the presence of strong electric fields which will ionize the gas within the tube. Any such ionization will cause erratic performance.

Cooling of the 6130/3C45 is accomplished by natural circulation of air around it. Under no circumstances should a stream of cooling air be applied to the glass envelope.
