3CW40,000H3

MEDIUM-MU

**WATER-COOLED
 POWER TRIODE**

The EIMAC 3CW40,000H3 is a water-cooled, ceramic-metal power triode designed primarily for use in industrial radio-frequency heating services. Its water-cooled anode is conservatively rated at 40 kilowatts of plate dissipation with low waterflow and pressure drop.

Input of 80 kilowatts is permissible up to 90 megahertz. Plentiful reserve emission is available from its 1500 watt filament. The grid structure is rated at 750 watts, making this tube an excellent choice for severe applications.

GENERAL CHARACTERISTICS

ELECTRICAL

Filament: Thoriated-Tungsten							
Voltage	-	-	-	-	-	10	volts
Current	-	-	-	-	-	152	168 amps
Amplification Factor	-	-	-	-	-	20	
Interelectrode Capacitances, Grounded Cathode:							
Grid-Filament	-	-	-	-	-	65	75 pF
Plate-Filament	-	-	-	-	-	2.0	2.6 pF
Grid Plate	-	-	-	-	-	38	48 pF
Frequency for Maximum Ratings	-	-	-	-	-	90	MHz

MECHANICAL

Base	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	See Outline
Operating Position	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	Vertical, base up or down
Cooling	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	Water and Forced Air
Maximum Operating Temperatures:																		
Ceramic-to-Metal Seals	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	250°C
Maximum Dimensions:																		
Height	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	See Outline
Diameter	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	See Outline
Net Weight	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	14 pounds

**RF INDUSTRIAL OSCILLATOR**

Class-C (Filtered DC Power Supply)

MAXIMUM RATINGS

DC PLATE VOLTAGE	-	-	-	12,000 VOLTS
DC PLATE CURRENT	-	-	-	9.0 AMPS
DC GRID VOLTAGE	-	-	-	-1200 VOLTS
DC GRID CURRENT	-	-	-	1.2 AMPS
PLATE INPUT POWER	-	-	-	100 KW
PLATE DISSIPATION	-	-	-	40 KW

TYPICAL OPERATION*

DC Plate Voltage	-	-	-	7000	10,000 volts
DC Plate Current	-	-	-	7.7	9.0 amps
DC Grid Voltage	-	-	-	-700	-850 volts
DC Grid Current	-	-	-	.53	.742 amps
Peak Positive Grid Voltage	-	-	-	440	550 volts
Driving Power	-	-	-	600	1040 watts
Plate Input Power	-	-	-	54	90 kW
Plate Dissipation	-	-	-	16	20 kW
Plate Output Power	-	-	-	37.7	70 kW
Approximate Load Impedance	-	-	-	408	526 ohms

*Loaded Conditions

Note: "TYPICAL OPERATION" data are obtained by calculation from published characteristic curves and confirmed by direct tests. No allowance for circuit losses, either input or output, has been made.

APPLICATION**ELECTRICAL**

Filament — The rated filament voltage for the 3CW40,000H3 is 10.0 volts. Filament voltage, as measured at the tube, should be maintained at this value for consistent performance and maximum tube life. In no case should it be allowed to vary from 10.0 volts by more than plus or minus five percent.

Control Grid Operation — The grid current rating is 1.2 ampere dc. This value should not be exceeded for more than very short periods such as during tuning and over-current protection in the grid circuit should be provided. Ordinarily it will not be necessary to operate with more than 0.3 to 0.6 amp grid current to obtain reasonable efficiency. In industrial heating service with varying loads, grid current should be monitored continuously with a dc current meter. The maximum grid dissipation rating is 750 watts.

Plate Operation — Maximum plate voltage rating of 12,000 volts and maximum plate current of 9.0 amps should not be applied simultaneously as rated plate dissipation may be exceeded. The 100 kilowatts input rating applies for Class-C amplifier or oscillator service with no modulation.

Plate over-current protection should be provided to remove plate voltage quickly in the event of an over-load or an arc-over at the load. In addition current limiting power supply resistors should be used. These precautions are especially important in industrial service with its wide variations in loading.

Spark gaps from plate to ground should be used to prevent transient voltages from flashing across the tube envelope during any fault conditions.

High Frequency Operation — The 3CW40,000H3 is usable to 120 MHz. At this frequency, plate voltage must be reduced to 7000 volts in Class-C service.

MECHANICAL

Mounting — The 3CW40,000H3 must be mounted vertically, either base up or down.

Cooling — The anode of the 3CW40,000H3 is cooled by circulating water through the integral anode-water jacket. The table below lists minimum water-flow rates at various plate dissipation levels. The table is based on a water temperature rise of 15°C.

MINIMUM COOLING WATER-FLOW REQUIREMENTS		
Plate Dissipation (kW)	Water Flow (gpm)	Pressure Drop (psi)
20	5.25	4.0
30	7.6	6.5
40	10.2	13.0
50	12.6	21.0

Since power dissipated by the filament represents 1500 watts and grid dissipation can reach 750 watts, 2250 watts has been added to anode dissipation in preparing this tabulation.

The cooling table assumes that the maximum outlet-water temperature will be below 70°C to preclude "spot" boiling.

Additional stem cooling air must be provided. 20 CFM of air directed against the center filament contact ring 1/2" below the outer filament contact ring by a 1 1/2" I.D. air duct arranged at a 45° angle with the center line of the tube will provide adequate cooling for maximum frequency of 30 MHz, 50°C ambient, and 5000 ft. altitude.

Special Application — If it is desired to operate this tube under conditions widely different from those given here, write to Power Grid Product Manager, EIMAC Division of Varian, 301 Industrial Way, San Carlos, California 94070, for information and recommendations.
