TYPICAL PERFORMANCE DATA

At recommended operating values, unless otherwise specified.

Anode Current	70 to 30% of cathode current
Grid-No.3 Current	30 to 70% of cathode current
Typical Trace Luminance ^c	See accompanying <i>Typical Trace Luminance Characteristic</i>
Typical Center Line Width ^d	0.010 in
Spot Position	See footnote e

MAXIMUM CIRCUIT VALUE

Grid-No.1 Circuit Resistance	1.5 max. M Ω
------------------------------------	---------------------

^b For maximum cathode life, it is recommended that the heater supply be regulated at 6.3 volts.

^c Average luminance (brightness) at the center of a single trace scanned at a given sweep speed and refreshed at a given rate.

^d Measured by shrinking raster technique at an anode current of 100 microamperes.

^e The center of the undeflected, unfocused spot will fall within a circle having a 0.8 inch diameter concentric with the center of the tube face.

X-RADIATION WARNING

Because the 4557 is designed to be operated at anode voltages as high as 16,000 volts, shielding of the 4557 for X-radiation may be needed to protect against possible injury from prolonged exposure at close range.
