

Super-Power Triode

8 MEGAWATTS OF PEAK POWER OUTPUT AT 425 MHz

MATRIX-OXIDE-TYPE
CATHODE
LIQUID COOLED

DOUBLE-ENDED TERMINAL
CONFIGURATION FOR
SYMMETRICAL CIRCUITRY

*For RF Power Amplifier in Pulse Service
at Frequencies up to 450 MHz*

ELECTRICAL

Filamentary Cathode, Multistrand, Matrix-Oxide-Type^k—

Current (DC):

Typical operating value	1800	A
Maximum value ^a	2000	A
Maximum value for starting, even momentarily	2000	A
Minimum time to reach operating current	30	s
Minimum time at normal operating current before plate voltage is applied.	60	s

Voltage (DC):^b

Typical value required to obtain 1800 amperes	1.5	V
--	-----	---

Direct Interelectrode Capacitances

Grid to plate	160	pF
Grid to cathode	1500	pF
Plate to cathode	Less than 1.0	pF

MECHANICAL

Operating Position. Tube axis vertical, either end up
Overall Length. 17 max in
Maximum Width 24 max in
Weight

Uncrated.	190 lb
Crated.	355 lb

Terminal Connections. (See *Dimensional Outline*)

THERMAL^{m, n}

Ceramic-Insulator Temperature 150 max °C
Metal-Surface Temperature 100 max °C
Minimum Storage Temperature -65 min °C
Water Flow

	Max. Pressure		
	Absolute	Differential	
Typ. Flow	Min. Flow	for Typ. Flow ^c	
g/m	g/m	psi	
To plate:			
Total flow for two parallel input and output coolant courses:			
For plate dissipation up to 50 kW (Average)	40	35	4
For plate dissipation of 150 kW (Average)	100	90	25

Water Flow (con'd)

	Typ. Flow g/m	Absolute Min. Flow g/m	Max. Pressure Differential for Typ. Flow ^c psi
To upper grid coolant course	3	2	25
To lower grid coolant course	3	2	25
To grid-cathode coolant course	12	10	6
Resistivity of water at 25°C:			
Through plate and grid coolant courses. . .			1 min MΩ-cm
Through grid-cathode coolant course			5 min MΩ-cm
Water temperature from any outlet			70 max °C
External gas pressure ^{d,e}			65 max psig
Maximum water pressure at any inlet.			90 max psig

TERMINAL DIAGRAM (Bottom View)

FI—Filament Terminal (Inner)
 FO—Filament Terminal (Outer)
 KURF—Upper RF Cathode Terminal
 KLRF—Lower RF Cathode Terminal
 GUIRF—Upper RF Grid Input Terminal
 GUORF—Upper RF Grid Output Terminal
 GLIRF—Lower RF Grid Input Terminal
 GLORF—Lower RF Grid Output Terminal
 PLRF—Lower RF Plate Terminal
 PURF—Upper RF Plate Terminal

PULSED RF AMPLIFIER^P

Absolute-Maximum Ratings

For a maximum "ON" time of 25 microseconds in any 2500-microsecond interval, for frequencies up to 450 MHz

Peak Positive-Pulse Plate Voltage ^f	40	kV
Peak Negative Grid Voltage.	200	V
Peak Plate Current.	500	A
Peak Cathode Current ^g	750	A
DC Plate Current.	5	A
DC Cathode Current ^g	7.5	A
Plate Input (Average)	200	kW
Plate Dissipation (Average)	150	kW

Typical Plate-Pulsed Operation

With Rectangular Wave Shape in Cathode-Drive Circuit

With duty factor of 0.01 and pulse duration of 25 microseconds

At 425 MHz

Peak Positive-Pulse Plate-to-Grid Voltage ^{f,h}	30000	35000	V
Peak Cathode-to-Grid Voltage ^h	60	70	V
Peak Plate Current.	310	400	A
Peak Cathode Current ^g	525	680	A
DC Plate Current.	3.1	4	A
DC Cathode Current ^g	5.2	6.8	A

Peak Driver Power Output ^j	250	350	kW
Useful Peak Power Output.	5	8	MW

- ^a The specified maximum filament current is a maximum rating which should not be exceeded, even momentarily, during operation of the tube. The life of the tube can be conserved by operating the filament at the lowest current which will enable the tube to provide the desired power output. Because the filament when operated near the maximum value usually provides emission in excess of any requirements within the tube ratings, the filament current should be reduced to a value that will give adequate but not excessive emission for any particular application. Good regulation of the filament current is, in general, economically advantageous from the viewpoint of tube life.
- ^b Measured between KLRF and KURF (See *Terminal Diagram*).
- ^c Measured directly across cooled element for the indicated typical flow.
- ^d This pressure is related to the output-cavity pressurization when required to prevent corona or external flash-over.
- ^e With the gauge located in an area where the maximum pressure external to the gauge is one atmosphere absolute.
- ^f The magnitude of any spike on the plate voltage pulse should not exceed its peak value by more than 10%, and the duration of any spike when measured at the peak-value level should not exceed 5% of the pulse duration.
- ^g Peak or average cathode current is the total of the peak or average plate current and the peak or average rectified grid current. (Pulses may not be coincident, hence they may not necessarily be added directly).
- ^h Preferably obtained from a cathode bias resistor.
- ^j The driver stage is required to supply tube losses, rf circuit losses, and rf power added to the plate circuit. The driver stage should be designed to provide an excess of power above the indicated value to take care of variations in line voltage, in components, in initial tube characteristics, and in tube characteristics during life.

The following footnotes apply to the *RCA Transmitting Tube Operating Considerations* given at the front of this section.

- ^m See *Cooling Considerations* - Forced-Air Cooling.
- ⁿ See *Cooling Considerations* - Liquid Cooling.
- ^p See *Classes of Service*.

CHARACTERISTICS RANGE VALUES

	Note	Min	Max	
Filament Voltage.	1	1	1.8	V
Input Strap-Resonant Frequency.	-	90	120	MHz
Output Strap-Resonant Frequency	-	240	280	MHz
Direct Interelectrode Capacitances				
Grid to plate	-	120	180	pF
Grid to cathode	-	1250	1700	pF

Note 1: With 1800 amperes through filament.
