TENTATIVE DATA

4CX600A

(formerly X2009)

The 4CX600A is a compact radial-beam tetrode with low lead inductances and low inter-electrode capacitances, designed for use in distributed amplifiers and in UHF service up to 1300 Mc. Maximum plate dissipation is 600 watts.

A feature of this tube is the integral screen-cathode by-pass capacitor. One side of the heater is terminated in a "deck" attached to this capacitor while the other heater contact is brought out on a pin on the tube base. The control grid is brought out to four threaded pins on the base.
