WESTINGHOUSE ELECTRIC CORPORATION

6X-5705

The 6X-5705 is a three-electrode tube designed for use as a modulator, amplifier and oscillator. The anode is water-cooled and capable of dissipating 10 kilowatts. The cathode is a pure tungsten filament. Maximum ratings apply up to 30 megacycles.

Maximum ratings apply up to 30 megacycles. The tube may be operated at higher frequencies provided the maximum values of plate voltage and power input are reduced according to the tabulation below (other maximum ratings are the same as shown above). Special attention should be given to adequate ventilation of the bulb at these frequencies.

Frequency	30	55	110	Mco.
Percentage of Maximum Rated Plate Voltage and Plate Input:				
Class B	100	85	75	5
Class C Plate Modulated	100	85	75	5
Class C Unmodulated	100	75	50	5
