

CATHODE-RAY TUBE

TYPE 5ABP-A

The Du Mont Type 5ABP-A is similar to Type 5ABP- except for tightened tolerances on angle between traces, pattern distortion, deflection factor uniformity, and spot centering. Other features of the 5ABP-A are reduced deflection defocusing and greater light output at a lower screen voltage. An aluminized screen is used, specially designed to give greater light output at voltages as low as 2,500 volts.

GENERAL CHARACTERISTICS (Mechanical Data) (Continued)

Base Alignment:

D1D2 trace aligns with Pin No. 5 and Tube Axis	± 10	Degrees
Positive voltage on D1 deflects beam approximately toward Pin No. 5		
Positive voltage on D3 deflects beam approximately toward Pin No. 2		
Angle between D3D4 and D1D2 traces	$90 \pm .8$	Degrees

Bulb Contact Alignment:

J1-22 cap aligns with D1D2 trace	± 10	Degrees
J1-22 cap on same side as Pin No. 5		

Weight	2 1/4	Pounds Approx.

NOTES

1. Visual extinction of undeflected, focused spot.
2. Measured in accordance with MIL-E-1 specifications.
3. The deflection factor (for both D1D2 and D3D4 plate pairs, separately) for any deflection of less than 90% of the useful scan will not differ from the deflection factor for a deflection at 30% of the useful scan by more than the indicated value.
4. Reduction in useful scan when post accelerator voltage is greater than accelerator voltage, is determined by the ratio of these voltages measured with respect to cathode. Values shown are therefore applicable to any operating condition with the same voltage ratios.
5. All portions of a raster pattern, adjusted so its widest points just touch the sides of a 4.000-inch square, will fall within the area bounded by the 4.000-inch square and an inscribed 3.880-inch square, except at the corners where the geometry of the tube makes this impossible.
6. With Ec1 adjusted to avoid damage to the screen, with each deflecting electrode connected to the accelerator, and with the tube shielded against external influences, the spot will fall within a 5/16-inch radius circle, concentric with the tube face.
7. It is recommended that the deflecting-electrode circuit resistances be approximately equal.
