

## TYPE 5AHP-, 5AHP-A CATHODE-RAY TUBE

The Type 5AHP- is a 5-in electrostatic focus and magnetic deflection cathode-ray tube suitable for radar applications. A low-voltage electrostatic focus lens is employed, designed to operate at or near cathode potential to afford substantially automatic focus, independent of accelerator voltage variations. In addition, the 5AHP- employs the Du Mont high-resolution electron gun. Spot size of the Self-focus Type 5AHP- is materially better than that of magnetically focused types, with a gain of approximately 20% in resolution over the magnetically focused types. Little sacrifice in internal light output is observed and weight and space are saved by the elimination of the focus coil.

The Type 5AHP-A utilizes an aluminized screen for greater light output and to minimize screen charging effects; it is otherwise identical to the 5AHP-. If a P19 screen is selected, the aluminized version should be used.

### GENERAL CHARACTERISTICS

#### Electrical

|                                             |                |             |        |
|---------------------------------------------|----------------|-------------|--------|
| Heater Voltage .....                        | 6.3 Volts      |             |        |
| Heater Current .....                        | 0.6±10% Ampere |             |        |
| Focusing Method .....                       | Electrostatic  |             |        |
| Deflecting Method .....                     | Magnetic       |             |        |
| Deflecting Angle (approx.) .....            | 53 Degrees     |             |        |
| Phosphor                                    | No. 7          | No. 14      | No. 19 |
| Fluorescence                                | Blue           | Blue        | Orange |
| Phosphorescence                             | Yellow         | Orange      | Orange |
| Persistence                                 | Long           | Medium-long | Long   |
| Direct Interelectrode Capacitances, Approx. |                |             |        |
| Cathode to all other electrodes .....       | 5              |             | μμf.   |
| Grid No. 1 to all other electrodes .....    | 6              |             | μμf.   |

#### Mechanical

|                                              |                       |
|----------------------------------------------|-----------------------|
| Overall Length .....                         | 11 1/8 ± 1/4 Inches   |
| Greatest Diameter of Bulb .....              | 4 15/16 ± 3/32 Inches |
| Minimum Useful Screen Diameter .....         | 4 1/4 Inches          |
| Bulb Contact (Recessed Small Ball Cap) ..... | J1-22                 |
| Base (Medium-Shell Octal 8-Pin) .....        | B8-65 or B8-11        |
| Basing .....                                 | 8EF                   |
| Bulb Contact Alignment                       |                       |
| J1-22 Contact aligns with pin No. 5 .....    | ±10 Degrees           |

#### MAXIMUM RATINGS—(Design Center Values)

|                                               |                              |
|-----------------------------------------------|------------------------------|
| Accelerator Voltage .....                     | 10,000 Max. Volts D-C        |
| Focusing Electrode Voltage .....              | —500 to +1000 Max. Volts D-C |
| Grid No. 2 Voltage .....                      | 700 Max. Volts D-C           |
| Grid No. 1 Voltage                            |                              |
| Negative Bias Value .....                     | 180 Max. Volts D-C           |
| Positive Bias Value <sup>1</sup> .....        | 0 Max. Volts D-C             |
| Positive Peak Value .....                     | 0 Max. Volts                 |
| Peak Heater-Cathode Voltage                   |                              |
| Heater Negative with respect to Cathode ..... | 180 Max. Volts D-C           |
| Heater Positive with respect to Cathode ..... | 180 Max. Volts D-C           |

#### TYPICAL OPERATING CONDITIONS

|                                               |            |            |           |
|-----------------------------------------------|------------|------------|-----------|
| Accelerator Voltage <sup>2</sup> .....        | 5,000      | 7,000      | Volts D-C |
| Focusing Electrode Voltage <sup>3</sup> ..... | 0 to 200   | 0 to 250   | Volts D-C |
| Focusing Electrode Current .....              | —15 to +15 | —15 to +15 | μA. D-C   |
| Grid No. 2 Voltage .....                      | 300        | 300        | Volts D-C |
| Grid No. 1 Voltage <sup>4</sup> .....         | —28 to —72 | —28 to —72 | Volts D-C |
| Line Width A <sup>5</sup> .....               | .010       | .009       | Inch Max. |
| Spot Position (Undelected) <sup>6</sup> ..... | 5/16       | 5/16       | Inch      |
| Alignment Magnet Field Strength               | 0-4        | 0-4        | Gausses   |

## MAXIMUM CIRCUIT VALUES

Grid No. 1 Circuit Resistance ..... 1.5 Max. Megohms

### NOTES

1. At or near this rating, the effective resistance of the accelerator supply should be adequate to limit the accelerator input power to 6 watts. The screen of the 5AHP19-A can be permanently damaged should the current density be permitted to rise too high. To prevent burning, minimum beam current densities should be employed.
2. Brilliance and definition decrease with decreasing accelerator voltage. In general, accelerator voltage should not be less than 5,000 volts, except for the 5AHP19-A. For this type, the accelerator voltage should not be less than 7,000 volts.
3. With Grid No. 1 voltage adjusted to produce an accelerator current of 100  $\mu$ A., with the pattern adjusted for best overall focus. Measured with a 525-line interlaced and synchronized  $2\frac{3}{4} \times 3\frac{3}{4}$ -inch pattern, with interlaced line blanking (current measured before applying blanking).
4. Visual extinction of focused  $2\frac{3}{4} \times 3\frac{3}{4}$ -inch raster pattern.
5. Measured with a 525-line interlaced and synchronized pattern with interlaced line blanking. Pattern width adjusted to 90% of minimum useful screen diameter.  $I_b = 100 \mu$ A., measured before applying blanking. Line width is the merged raster height divided by the number of lines (262.5) (measured in center of tube face).  
The 5AHP19-A should be checked at 7,000 volts. To avoid damage to the screen, it is recommended that the screen current be not more than 50  $\mu$ A. when measuring line width. The line width under these conditions will be .009 inch maximum (current measured before applying blanking).
6. The center of the undeflected, focused spot will fall within a circle of  $\frac{5}{16}$ -inch radius concentric with the center of the tube face, with the tube shielded.
7. For optimum quality of the focussed spot, the use of a beam alignment magnet is recommended. This may be obtained by the use of an adjustable magnet of the specified strength located approximately  $5\frac{1}{8}$  inches from the reference line.

### TYPE 5AHP-

NOTE:  
1—DO NOT HANDLE TUBE BY THE PART OF THE BULB  
HAVING THE ANTI-CORONA COATING.
