SPECIAL AND GENERAL PURPOSE
CATHODE RAY TUBES

NOTE:

1. External conductive neck coating must be grounded.

WARNING:

X-ray radiation shielding may be necessary to protect against possible danger of personal injury from prolonged exposure at close range if this tube is operated at higher than the manufacturer's Maximum Rated Anode Voltage or 16,000 volts, whichever is less.

OUTLINE

DIAGRAM NOTES:

1. The plane through the tube axis and vacant pin position No. 3 may vary from the plane through the tube axis and anode terminal by an angular tolerance (measured about the tube axis) of $\pm 10^\circ$. Anode terminal is on the same side as vacant pin position No. 3.
2. With tube neck inserted through flared end of reference line gauge (JEDEC No. 110) and with the tube seated in the gauge, the reference line is determined by intersection of plane CC' of the gauge with the glass funnel.
3. The 5AUP- should be handled by the neck only. Fingerprints or dust on the insulating coating on the bulb may cause electrical breakdown during humid weather.
