

5CUP18 CATHODE RAY TUBE TELEVISION FILM RECORDING TUBE

The 5CUP18 is a 5-inch electrostatic-focus and magnetic-deflection cathode ray tube intended primarily for use in high definition television recorders. A particular feature of this tube is an optically flat faceplate utilizing non-browning glass. Other features include a metal backed screen for high brightness and a straight electron gun. With other special phosphors the same generic tube may be used as a flying spot light source, monitor, or radar type cathode ray tube.

1. The reference line is determined by the position where reference line gauge JEDEC No. 112 rests against the funnel.
2. X-ray radiation shielding may be necessary to protect against possible danger of personal injury from prolonged exposure at close range when this tube is operated at recommended anode voltages.
3. At or near maximum anode potential suitable precautions should be taken to prevent arcing between the anode button and the deflection yoke during high humidity conditions.
4. The anode contact aligns with vacant pin position No. 3 $\pm 10^\circ$.
