CATHODE RAY TUBES

NOTES:

1. Positive voltage on D1 (Pin No. 10) will move spot approximately in direction of Pin No. 4.
Positive voltage on D3 (Pin No. 6) will move spot approximately in direction of Pin No. 1.
2. Brilliance and definition decrease with decreasing Anode No. 2 Voltages. In general, Anode No. 2 Voltage should not be less than 1000 volts for the Type 5DEP1 and not less than 1500 volts for the Types 5DEP2, 5DEP7, and 5DEP11.
3. Visual extinction of undeflected focused spot.
4. Angle between trace produced by Plates D1-D2 and the plane through the tube axis and Pin No. 4 does not exceed 10° .
5. Angle between D1-D2 trace and D3-D4 trace is $90^\circ \pm 1^\circ$.
6. Deflecting Plates 1-2 are nearer the screen.
7. Deflecting Plates 3-4 are nearer the base.
8. With the tube shielded and with all deflection plates connected to A2, the spot shall fall within a square, 10 mm on a side, centered with respect to the face and with the sides parallel to the deflection axes.
