

Type 6678/6U8 is designed specifically for use in mobile communication's equipment. The 6678/6U8 may be operated without serious degradation under normal variations in supply voltage as encountered with automotive electrical systems. Also consistent with the requirements of the equipment the tube is capable of withstanding appreciable on-off cycling.

QUICK REFERENCE DATA

Sylvania Type 6678/6U8 is designed specifically for mobile operation. It is a T-6 $\frac{1}{2}$ triode-pentode intended for VHF OSC/MIXER service.

Type 6678/6U8 possesses electrical characteristics essentially equivalent to Type 6U8.

SPECIAL TESTS AND RATINGS

Heater Cycling Ratings

Cycles of Intermittent Operation (Minimum) 2000 Cycles

$E_f = 7.5$ volts cycled for one minute on and one minute off.

$E_b + E_{c2} + E_{c1} = 0$ volts.

$E_{hk} = 135$ volts with heater positive with respect to cathode.

Average Transconductance at Reduced Heater Voltage

Pentode Section 4100 μ mhos

$E_f = 5.0$ volts, $E_b = 250$ volts, $E_{c2} = 110$ volts,

$R_k = 68$ ohms (bypassed)

Average Transconductance at Reduced Heater Voltage

Triode Section 6800 μ mhos

$E_f = 5.0$ volts, $E_b = 150$ volts,

$R_k = 56$ ohms (bypassed)

NOTE:

1. When operated from automotive electrical systems, the heater may be subjected to voltage variations as great as ± 20 percent. Although such extremes in heater voltage may be tolerated for short periods, increased equipment reliability can be achieved with improved supply-voltage regulation.
