 e The maximum rating for a signal having a minimum peak-to-average power ratio less than 2, such as is obtained in "Single-Tone" operation, is 180 mA. During short periods of circuit adjustment under "Single-Tone" conditions, the average plate current may be as high as 250 mA.
 f In applications where the frequency is less than 80 MHz and the bias is less than -50 volts, the maximum value is 40 mA.
