SUPER-POWER SHIELDED- GRID BEAM TRIODE

COAXIAL-ELECTRODE STRUCTURE WATER-COOLED ELECTRODES
500-KW CW POWER OUTPUT INTEGRAL WATER DUCTS

Useful with full input up to 75 Mc

GENERAL DATA

Electrical:

Filament, Multistrand Thoriated Tungsten:

Voltage (Single-phase AC or DC)	{ 7.3 min. volts 7.8 max. volts
Current at 7.3 volts.	1040 amp
Current at 7.8 volts.	1130 amp
Starting current.	Must never exceed 1700 amperes, even momentarily
Cold resistance	0.0013 ohm
Minimum heating time.	60 seconds

Amplification Factor, for dc grid
volts = -50 and dc plate voltage
adjusted to give dc plate current

of 10 amperes 60

Direct Interelectrode Capacitances:

Grid to plate	12 μf
Grid to filament.	1300 μf
Plate to filament	160 μf

Mechanical:

Operating Position. Vertical, with lifting ring up
Maximum Overall Length. 40"
Maximum Diameter. 10.06"
Weight (Approx.). 140 lbs
Terminal Connections (See Dimensional Outline):

F_C - Filament
Cylindrical
Terminal

F_F - Filament

Terminal

Air Cooling:

It is important that the temperature of any external part of the tube should not exceed 150° C. In general, forced-air cooling of the ceramic bushings will not be required unless the 6949 is used in cavity-type circuits or in a confined space without free circulation of air. Under such conditions, provision should be made for blowing an adequate quantity of air at the ceramic bushings to limit their temperature to 150° C. Forced-air cooling of the output-

6949

SUPER-POWER SHIELDED- GRID BEAM TRIODE

circuit-return terminal (K_{R1}) and the flange input-circuit-return terminal (K_{R2}) may be necessary to prevent exceeding the maximum temperature rating of 150°C , particularly at vhf frequencies.

Water Cooling:

Water cooling of the beam-forming cylinder, grid-terminal, and the plate is required. The water flow must start before application of any voltages and preferably should continue for several minutes after removal of all voltages. Interlocking of the water flow for each of the cooled elements with all power supplies is recommended to prevent tube damage in case of failure of adequate water flow. The use of distilled water is essential.

Water Flow:

	Absolute Min. Flow gpm	Typical Flow gpm	Pressure Drop [‡] Typical Flow psi	Max. Gauge Pres- sure [□] psi
To plate (In direction shown on <i>Dimensional Outline</i>):				
For plate dissipation up to 125 kw.	40	44	18	100
For plate dissipation of 260 kw	60	66	35	100
For plate dissipation of 330 kw	70	77	48	100
For plate dissipation of 400 kw	80	88	65	100
To grid-terminal connector	1	—	—	—
To beam-forming cylinder	7	8	9	50
Outlet Water Temperature (Any outlet)			70 max.	$^{\circ}\text{C}$
Minimum Plate-Water-Column Resistance			1/2 megohm per kv of dc plate voltage	
Ceramic-Bushing Temperature			150 max.	$^{\circ}\text{C}$
Metal-Surface Temperature			150 max.	$^{\circ}\text{C}$

Fittings:

Fittings for the plate and beam-forming-cylinder water connections may be obtained from the Breco Division, Perfecting Service Co., 332 Atando Ave., Charlotte 6, North Carolina, USA.

SUPER-POWER SHIELDED- GRID BEAM TRIODE

LINEAR RF POWER AMPLIFIER Single-Sideband Suppressed-Carrier Service

Crest of modulation conditions

Maximum CCS[®] Ratings, Absolute Values:

For altitudes up to 5,000 feet and frequencies up to 75 Mc

DC PLATE VOLTAGE	20000 max.	volts
MAX.-SIGNAL DC PLATE CURRENT	60 max.	amp
MAX.-SIGNAL PLATE INPUT	1100000 max.	watts
MAX.-SIGNAL DC GRID CURRENT	1.5 max.	amp
PLATE DISSIPATION (Average)	400000 max.	watts

Typical CCS Class B Operation at 10 Mc:

DC Plate Voltage	18000	volts
DC Grid Voltage (Approx.)*	-300	volts
Zero-Signal DC Plate Current	5	amp
Effective RF Load Resistance	170	ohms

"Single-Tone" Operation:[®]

Max.-signal dc plate current	57	amp
Max.-signal dc grid current	0.35	amp
Max.-signal peak rf grid voltage	1900	volts
Max.-signal driving power (Approx.)	10000**	watts
Max.-signal power output (Approx.)	600000	watts

"Two-Tone" Operation:^{⚡⚡}

Average dc plate current	37	amp
Average dc grid current	0.22	amp
Peak envelope rf grid voltage	1900	volts
Average power output (Approx.)	300000	watts
Peak envelope power output (Approx.)	600000	watts

RF POWER AMPLIFIER — Class C Telegraphy^{##} and

RF POWER AMPLIFIER — Class C FM Telephony

Maximum CCS[®] Ratings, Absolute Values:

For altitudes up to 5,000 feet and frequencies up to 75 Mc

DC PLATE VOLTAGE	20000 max.	volts
DC GRID VOLTAGE	-1000 max.	volts
DC PLATE CURRENT	50 max.	amp
DC GRID CURRENT	1.5 max.	amp
PLATE INPUT	1000000 max.	watts
PLATE DISSIPATION	400000 max.	watts

Typical CCS Operation at 425 Kc:

DC Plate Voltage	17500	volts
DC Grid Voltage [▲]	-625	volts
Peak RF Grid Voltage	2000	volts
DC Plate Current	40	amp
DC Grid Current	1	amp

6949

SUPER-POWER SHIELDED- GRID BEAM TRIODE

Driving Power (Approx.) ¹	2000	watts
Useful Power Output (Approx.)	500000	watts

CHARACTERISTICS RANGE VALUES FOR EQUIPMENT DESIGN

	Note	Min.	Max.	
Filament Current	1	870	1100	amp
Amplification Factor	1,2	48	74	
Direct Interelectrode Capacitances:				
Grid to plate	—	—	20	μmf
Grid to filament	—	1150	1550	μmf
Plate to filament	—	140	170	μmf

Note 1: With 7.3 volts ac on filament.

Note 2: For dc grid volts = -50 and dc plate voltage adjusted to give dc plate current of 10 amperes.

⊕ Directly across cooled element for the indicated typical flow.

□ At tube inlets.

● Continuous Commercial Service.

* Obtained from a fixed supply. Value should be adjusted to give indicated value of zero-signal plate current.

⊕ "Single-Tone" operation refers to that class of amplifier service in which the grid-No.1 input consists of a monofrequency rf signal having constant amplitude. This signal is produced in a single-sideband suppressed-carrier system when a single audio frequency of constant amplitude is applied to the input of the system.

** Includes tube losses, circuit losses, and "swamping power" losses.

⊕ "Two-Tone" operation refers to the simultaneous amplification of the two equal-amplitude, radio-frequency signals resulting from modulation of a single-sideband, suppressed-carrier transmitter by two audio-frequency signals of equal amplitude. The data shown for "Two-Tone" modulation refer to the case in which the peak amplitude of the resultant rf grid signal is equal to the "Max.-Signal Peak RF Grid-No.1 Voltage" as specified under "Single-Tone" modulation.

Key-down conditions pertain without amplitude modulation. Modulation essentially negative may be used if the positive peak of the audio-frequency envelope does not exceed 115% of the carrier conditions.

▲ Obtained from fixed supply.

● Additional driving power is required at frequencies where circuit losses become significant.

OPERATING CONSIDERATIONS

A high-speed, electronic protective device must be used to remove the plate voltage within a few microseconds in the event of abnormal operation such as internal arcing. The protective device employed to remove the plate voltage in any installation must be approved by the RCA Electron Tube Division. In addition, the grid circuit should be provided with overload relays which will act to remove within a period of 0.1 second all grid power in the event of excessive grid-current flow. Inquiries concerning a high-speed, electronic protective device for removal of plate voltage from the 6949 may be addressed to Commercial Engineering, Electron Tube Division, RCA, Harrison, N.J.

6949

6949

SUPER-POWER SHIELDED- GRID BEAM TRIODE

The 6949 can be operated with maximum ratings at frequencies up to 75 Mc and with reduced ratings to higher frequencies. The capabilities of the 6949 for operation at higher frequencies and at higher powers have not yet been determined but requests for information on specific applications will be welcomed.

Notes 1 to 8: See next page.

6949

6949

SUPER-POWER SHIELDED- GRID BEAM TRIODE

NOTE 1: SOCKET No. 412-BS 1-1/2" FOR THIS PLUG MAY BE OBTAINED FROM BRECO DIVISION, PERFECTING SERVICE CO., 332 ATANDO AVE., CHARLOTTE 6, N.C.

NOTE 2: SOCKET No. 4EF4 1/2" (WITH FEMALE PIPE-THREAD CONNECTION) OR SOCKET No. 4EM4 1/2" (WITH MALE PIPE-THREAD CONNECTION) MAY BE OBTAINED FROM SUPPLIER INDICATED IN NOTE 1.

NOTE 3: DIRECTION OF WATER FLOW THROUGH TUBE MUST BE IN DIRECTION INDICATED BY MARKINGS AT WATER CONNECTIONS.

NOTE 4: USE FOR FILAMENT POWER ONLY. INPUT-CIRCUIT RETURN SHOULD BE MADE TO BOTH INPUT-CIRCUIT-RETURN TERMINALS (KR₂ & KR₃); OUTPUT-CIRCUIT RETURN SHOULD BE MADE TO OUTPUT-CIRCUIT-RETURN TERMINAL (KR₁).

NOTE 5: REMOVE THIS CABLE BEFORE OPERATING TUBE AND KEEP CABLE FOR FUTURE TUBE HANDLING.

NOTE 6: DO NOT TAMPER WITH THESE BOLTS.

Notes 7 & 8: See next page.

SUPER-POWER SHIELDED-GRID BEAM TRIODE

NOTE 8: THIS AREA IS SUBJECT TO A MAXIMUM TAPER OF 0.060" TO THE INCH. THE MAXIMUM DIAMETER ALONG THIS TAPER WILL BE ON THE END TOWARD THE CERAMIC.
