

AMPEREX TUBE TYPE 6960

The 6960 is a water-cooled triode designed for use in industrial RF generators and communication transmitters. The construction and characteristics of the 6960 are similar to the AMPEREX tube type 5923. However, the 6960 features an exclusive, specially processed grid which makes possible its high grid current rating and overload characteristics. This is particularly desirable in heavy-duty industrial applications.

The filament is thoriated tungsten. Maximum ratings apply up to 30 megacycles. Typical conditions for Class C industrial oscillator operation at 50 megacycles is presented herein.

GENERAL CHARACTERISTICS

MECHANICAL

Mounting Position	vertical, plate up or down
Max. Temperature of Filament Seals	210°C
Max. Temperature of Grid & Plate Seals	180°C
Cooling	water & low velocity air flow (see curves)
Max. Inlet Water Temperature	50°C

ACCESSORIES

Filament Connector	Amperex No. S-3707
Filament Center Pin Connector ²	Amperex No. S-21000
Grid Connector (for use up to 30 mc)	Amperex No. S-17288
Grid Connector (for use above 30 mc)	Amperex No. S-3706
Water Jacket	Amperex No. S-3737
Net Weight (approx.)	1 lb.

ELECTRICAL

Filament Voltage	12.6 volts
Filament Current	33 amps
Amplification Factor	32
($I_b = 1$ amp; $E_b = 6000$ volts)	
Transconductance	15,000 micromhos
($I_b = 1$ amp; $E_b = 6000$ volts)	
Direct Interelectrode Capacitances	
Grid to Plate	11 μf
Grid to Filament	16 μf
Plate to Filament	0.3 μf

¹ At frequencies above 30 Mc it is necessary to direct a low velocity air flow to plate and grid seals.

² The filament center tap pin (0.413 dia.) must not be used for filament current supply. The filament center pin connector (S-21000) must, however be used for cooling of this pin.
