

6DE6
PENTODE

DESCRIPTION AND RATING

The 6DE6 is a miniature sharp-cutoff pentode designed especially for use as an intermediate-frequency amplifier in television receivers. The tube features high transconductance and relatively low interelectrode capacitances.

Design-Maximum Ratings are the limiting values expressed with respect to bogie tubes at which satisfactory tube life can be expected to occur for the types of service for which the tube is rated. Therefore, the equipment designer must establish the circuit design so that initially and throughout equipment life no design-maximum value is exceeded with a bogie tube under the worst probable operating conditions with respect to supply-voltage variation, equipment component variation, equipment control adjustment, load variation, and environmental conditions.
