Optimum peak plate current in frame output operation

To allow for tube spread and for deterioration during life in frame output application the circuit should be designed around a peak plate current not exceeding 90 mamps at a plate voltage of 50 volts and a grid No. 2 voltage of 170 volts and 120 mamps at a plate voltage of 60 volts and a grid No. 2 voltage of 200 volts

¹) When used as frame output tube with a plate dissipation of less than 4.5 watts the maximum permissible plate voltage is 450 volts

²) Maximum permissible pulse duration 10 % of a cycle with a maximum of 2 milli-seconds
