VHF HI GM TRIODE

7FP

The Sylvania Types 2GK5, 3GK5 and 6GK5 measured under grounded plate conditions yield an Input Resistance of 275 Ohms and an Input Capacitance of 11.2 μmf at 200 Mc. Noise measurements yield a Noise Figure of 4.7 db at 200 Mc in an optimized triode RF amplifier stage, noise matched.

NOTES:

1. For series/parallel operation of heaters, equipment should be designed that at normal supply voltage bogey tubes will operate at this value of heater current/voltage.
2. Heater warm-up time is defined as the time required for the voltage across the heater to reach 80% of the rated heater voltage after applying four (4) times rated heater voltage to a circuit consisting of the tube heater in series with a resistance equal to three (3) times the rated heater voltage divided by the rated heater current.
3. Heater voltage supply variations shall be restricted to maintain heater voltage/current within the specified values.
4. Measured under grounded plate conditions.
5. Optimized neutralized triode RF amplifier stage, noise matched.

APPLICATION

The Sylvania Types 2GK5, 3GK5 and 6GK5 are frame grid gain controlled triodes designed for use as VHF RF amplifiers at a B+ of 135 volts. Features of the design include: A partial shield between the grid and plate which lowers the capacitance between these two elements and promotes ease of neutralization; low input capacitance; and higher input impedance by virtue of dual cathode leads.
