

6SQ7 - 12SQ7

Description and Rating

DUPLEX-DIODE TRIODE

The 6SQ7 and 12SQ7 are metal duplex-diode high- μ triodes which are identical except for heater ratings. Each type is intended primarily for use as a combined detector, amplifier, and automatic-volume-control tube in radio receivers. The triode section incorporates a high amplification factor and is capable of providing a relatively large undistorted output voltage from a very small input signal.

Note: Coupling capacitors (C) should be selected to give desired frequency response. Rk should be adequately by-passed.

Notes: 1. Eo is maximum RMS voltage output for five percent (5%) total harmonic distortion. 2. Gain measured at 2.0 volts RMS output. 3. For zero-bias data, generator impedance is negligible.
