NOTES:

1. For operation in a 525 line, 30 frame system as described in "Standards of Good Engineering Practice for Television Broadcast Stations: Federal Communications Commission", the duty cycle of the voltage pulse must not exceed 15% of one scanning cycle.
2. Power rectifier operation is not recommended
3. Should not be exceeded under any condition of high line voltage or misadjustment.

QUICK REFERENCE DATA

The Sylvania 6V3A is a heater cathode type diode designed for service as a damping diode in television receiver direct drive sweep circuits. The cathode is connected to the top cap.

Except for bulb length, the Type 6V3A is identical to the Type 6V3. The 6V3A should be considered as the replacement for the Type 6V3.
