

AMPEREX TUBE TYPE 7237

The 7237 is a forced air-cooled triode designed for use in industrial RF generators and communication transmitters. The 7237 features an exclusive specially processed grid which makes possible its high grid current rating and overload characteristics. This is particularly desirable in heavy-duty, industrial applications.

The filament is thoriated tungsten. Maximum ratings apply up to 30 megacycles. Typical conditions for Class C industrial oscillator operation at 50 megacycles is presented herein.
