

7BP- CATHODE-RAY TUBES

The Types 7BP- Cathode-ray Tubes are 7-inch magnetically focussed and deflected cathode-ray tubes primarily designed for radar indicator and other applications requiring a relatively large, flat screen area and a long persistence screen. The Type 7BP- is very similar to the Type 7MP-, the chief difference being in bulb shape. Other typical radar tubes include the Types 5FP-, 10KP- and 12SP-.

MAXIMUM CIRCUIT VALUES

Grid No. 1 Circuit Resistance 1.5 Max. Megohms

MINIMUM CIRCUIT VALUES

When the output capacitor of the power supply is capable of storing more than 250 micro-coulombs, and when the inherent regulation of the power supply permits the instantaneous short-circuit current to exceed 1 ampere, the effective resistance in the circuit between the indicated electrode and the output capacitor should be as follows:

Grid No. 1 Circuit Resistance 150 Min. Ohms

Grid No. 2 Circuit Resistance 820 Min. Ohms

Anode Circuit Resistance 9,100 Min. Ohms

NOTES

1. At or near this rating, the effective resistance of the anode supply should be adequate to limit the anode input power to 6 watts.
2. Visual extinction of undeflected focused spot.
3. For JETEC standard focus coil No. 106, or equivalent, with the grid No. 1 voltage adjusted to produce an anode current of 200 microamperes and with distance (D) from reference line to center of air gap equal to 2.75 inches.
4. The center of the undeflected, unfocused spot will fall within a circle of 12 mm. radius concentric with the center of the tube face.
