DATA

General:

Heater, for Unipotential Cathode:

Voltage (AC or DC) $6.3 \pm 10\%$ volts
Current at heater volts = 6.3 0.600 amp

Direct Interelectrode Capacitance (Approx.):

Anode to all other electrodes 12 μf

Target-to-Mesh Spacing (Average) 0.001"

Spectral Response S-10

Wavelength of Maximum Response 4500 ± 300 angstroms

Photocathode, Semitransparent:

Rectangular image (4 x 3 aspect ratio):

Useful size of 1.8" max. diagonal

Note: The size of the optical image focused on the photocathode should be adjusted so that its maximum diagonal does not exceed the specified value. The corresponding electron image on the target should have a size such that the corners of the rectangle just touch the target ring; a condition that may be achieved in some camera designs with a 1.6" diagonal image on the photocathode.

Orientation of. . Proper orientation is obtained when the vertical scan is essentially parallel to the plane passing through center of faceplate and pin 7 of the shoulder base. The horizontal and vertical scan should preferably start at the corner of the raster nearest pin 6 of the shoulder base.

Focusing Method Magnetic

Deflection Method Magnetic

Overall Length $15.20" \pm 0.25"$

Greatest Diameter of Bulb $3.00" \pm 0.06"$

Minimum Deflection-Coil Inside Diameter $2\text{--}3/8"$

Deflecting-Coil Length 5"

Focusing-Coil Length 10"

Alignment-Coil:

Length $15/16"$

Position on neck Centerline of coil located
8.5" from flat area of the
jumbo annular base.

Photocathode Distance Inside End of Focusing Coil $1/2"$

Operating Position. . The tube should never be operated in a vertical position with the Diheptal-base end up nor in any other position where the axis of the tube with the base up makes an angle of less than 20° with the vertical.

NOTE: In the tube symbol, the suppressor grid connected to the cathode, and the field-mesh grid connected to grid No.4, are intentionally without numbers to avoid upsetting industry practice of associating functional camera control knobs with specified grid numbers. For example, beam-focus control is generally associated with knob identified as G_4 (Grid No.4).

^a Dynode-voltage values are shown under *Typical Operating Values*.

^b With 8093A operated in RCA-TK-11 or -TK-31 camera. Other cameras may require slightly different voltage ranges.

^c Adjust for best focus.

^d For minimum highlight flare or "ghost" the grid-No.6 voltage should be 73 per cent of the photocathode voltage.

^e Normal setting of target voltage is +2 volts from target cutoff. The target supply voltage should be adjustable from -3 to +5 volts.

^f Adjust to give the most uniformly shaded picture near maximum signal.

^g Direction of current should be such that a north-seeking pole is attracted to the image end of the focusing coil, with the indicator located outside of and at the image end of the focusing coil.

^h Measured with amplifier having flat frequency response.

^j Variation of response over scanned area.
