NUMERICAL INDICATOR Engineering Data Report

Bulletin No. 1028

January 1, 1963

8421

(B5092) Ultra Long Life NIXIE^R Tube

The 8421 (B5092) is a gas-filled, cold cathode, standard size numerical indicating tube containing a common anode and ten metallic cathodes. The cathodes are formed in the shape of numerals ("0" through "9"). The tube is intended for use as a direct in-line readout device.

MECHANICAL DATA

Overall Length 1.380 Max.
Seated Height 1.124 Max.
Bulb Diameter 1.080 Max.
Numeral Height 610 Nominal
Pin Connection See figure 3
Mounting Position See note 2
Weight 4 oz. nom.

ELECTRICAL DATA

Absolute Ratings

Ionization Voltage . . 170 Vdc Max.
Supply Voltage 170 Vdc Min.
(Note 1)
Cathode Current 3.5 ma Max.

Test Conditions

Supply Voltage (E) . . 170 Vdc
Series Resistor (R) . . 10 K
Cathode Current (I_k)
(minimum) 1.5 ma
(maximum) 3.0 ma

ENVIRONMENTAL DATA

Temperature -65° C. to +85° C.
Altitude 70,000 ft.

Figure 1. Basic Circuit

NOTES

1. The minimum supply voltage should be 170 volts. However, the use of the highest available voltage with the appropriate series resistor is recommended to maintain cathode current within the specified limits. A supply voltage of 200 volts or more is recommended to assure proper operation at the temperature extremes.
2. The tube should be oriented with pins 1 and 8 in a vertical line with pin 8 at the top.
