

TECHNICAL DATA

8933

PLANAR TRIODE

The 8933 is a miniature, ceramic/metal, rugged planar triode for advanced airborne and space applications up to 3.0 GHz.

The 8933 may be used as an amplifier, oscillator, or frequency multiplier in the grid- or plate-pulsed mode as well as a modulator or regulator tube. In addition to low interelectrode capacitance, high transconductance and amplification factor, the 8933 has an arc-resistant cathode, and a spewing shield, assuring stable, reliable, and long-life operation under adverse conditions.

The 8933 is supplied without radiator and may be conduction, convection, heat sink, or liquid cooled. Radiators for forced air cooling permitting an anode dissipation up to 150 watts can be furnished on separate order.

The 8933 is especially designed for applications where high RF pulse power is required. It can also be readily used in switch tube applications up to 8 kV dc.

GENERAL CHARACTERISTICS¹

ELECTRICAL

Cathode: Oxide Coated, Unipotential

Heater: Voltage 6.3 $\pm$ 0.3 V

Current, at 6.3 volts 1.30 A

Transconductance (Average):

$I_b = 160$ mA 38 mmhos

Amplification Factor (Average): 120

Direct Interelectrode Capacitance (grounded cathode)²

C_{in} 9.5 pF

C_{out} 0.06 pF

C_{gp} 1.40 pF

Cut-off Bias³ -30 V max

Frequency of Maximum Rating:

Plate or Grid-Pulsed 3.0 GHz

1. Characteristics and operating values are based upon performance tests. These figures may change without notice as the result of additional data or product refinement. EIMAC Division of Varian should be consulted before using this information for final equipment design.

2. Capacitance values are a cold tube as measured in a special shielded fixture. When the cathode is heated to the proper temperature, the grid-cathode capacitance will increase from the cold value by approximately 1 pF due to thermal expansion of the cathode.

3. Measured with one milliamperere plate current and a plate voltage of 1 kVdc.

Maximum Overall Dimensions:

Length	1.50 in; 38.10 mm
Diameter	.950 in; 24.13 mm
Net Weight	0.7 oz; 19.3 gm
Operating Position	Any
Maximum Operating Temperature:	
Ceramic/Metal Seals	250 °C
Cooling	Conduction, convection, forced air, or liquid

1. Using proper EIMAC radiator.
2. For applications using longer pulse duration and/or higher duty cycle consult the nearest Varian Electron Tube & Devices Field Office, or the Product Manager, EIMAC Division of Varian, Salt Lake City, Utah.

APPLICATION

For general application information please refer to the Planar Triode Operating Instruction Sheet. The operating instructions should be consulted prior to the designing of new requirements around the above tube type. For unusual and

special applications consult the nearest Varian Electron Tube Field Office, or the Product Manager, EIMAC Division of Varian, Salt Lake City, Utah.
