---	------------------

NOTES:

1. External conductive coating must be grounded.
2. Voltages are positive with respect to cathode unless indicated otherwise.
3. Visual extinction of focused raster. Extinction of stationary focused spot will require that these values be about 5 volts greater.
4. Voltages are positive with respect to Grid No. 1 unless indicated otherwise.
5. For JEDEC Ion Trap No. 117 or equivalent located with the trailing edge of the pole pieces located over the gap between Grid No. 1 and Grid No. 2 and rotated to give maximum brightness.

WARNING:

X-ray radiation shielding may be necessary to protect against possible danger of personal injury from prolonged exposure at close range if this tube is operated at higher than the manufacturer's Maximum Rated Anode Voltage or 16,000 volts, whichever is less.

OUTLINE

DIAGRAM NOTES:

1. Reference line is determined by plane C-C' of JEDEC No. 116 Reference Line Gauge, when the gauge is seated against the bulb.
2. Base Pin Position No. 6 aligns with horizontal centerline (A-A') within 30° and is on same side as anode contact (J1-21).
