===== DESCRIPTION AND RATING =====

The 8RP4 is an eight inch electrostatic focus and magnetic deflection cathode ray tube for monitor use in closed circuit television, studio broadcasting, and industrial applications. Outstanding features include a 70° deflection angle for a better center to edge focusing characteristic with a reduced deflection power requirement and a high resolution, non-ion trap electron gun.

NOTES:

+ The maximum ratings provide a ten percent safety factor in accordance with the standard design center system of rating cathode ray tubes. The tube will withstand the combined effects of variations in line voltage and components provided the maximum design center values are not exceeded by more than ten percent.

* For visual extinction of focused raster.

+++ Measured in accordance with MIL-E-1 paragraph 4.12.6.2 at an anode current of 100 μ a.

WARNING:

If this tube is operated at voltages in excess of 16,000 volts, x-ray radiation shielding may be necessary to avert possible danger of personal injury from prolonged exposure at close range. The protective face-viewing window of apparatus using tubes of this type may provide such a safeguard. If the radiation measured in contact with this window does not exceed 6.25 milliroentgens per hour, the window will normally provide adequate protection.
