cathode negative		V_{kf}	max.	60 V
Bulb temperature	Abs. max.	t_{bulb}	max.	190 °C

Heater voltage: The average heater voltage should be 6.3 V.

Variations of the heater voltage exceeding the range of 6.0 V to 6.6 V will shorten the tube life.

The tolerance of heater current (column II) should be taken into account.

¹⁾ Care should be taken not to exceed the rated W_{g2} values due to switching of positive supply voltages.

If the cathode is shunted by a capacitance $> 10 \mu F$ a series resistor of minimum 1 k Ω should be inserted in the grid No.1 lead.
