TENTATIVE

GENERAL

The F-2511 is a voltage-tunable, wide-band oscillator with a minimum output power of 25 milliwatts over its rated operating frequency range. This permanent magnet focused, highly stable device finds applications as a swept signal source in signal generators; master oscillator for frequency diversity transmitters; or typically as a local oscillator in radar or ECM receivers. The tube features a unifilar helix contained in a rugged envelope of simple mechanical design thus providing a highly reliable, compact unit. No cooling is required when the environment is below +60°C ambient temperature.

ELECTRICAL

Helix Current	4.0	6.0 max.	Ma				
*Cathode Voltage (with respect to Helix)	-550 to -2400	-450 to -2500	Volts				

*The above data shows tube operation with helix at ground potential (Zero Volts). If desired as an alternate, any one of the asterisked elements may be operated at ground potential, provided the other electrode potentials are set at the appropriate relative levels.

NOTE 1 The F-2511 will operate over the frequency range of 7.92 to 12.524 Gcs. with a 3 db reduction in the rated minimum output power.

NOTE 2 This value is determined by selecting the 440 mc region of the frequency range which has the greatest differences in power output. The difference between these power levels is divided by two and the plus or minus sign is affixed to denote the difference from an average power level.
