

F4186

TRAVELING WAVE TUBE

The F4186 is a wideband, high gain, traveling wave tube amplifier, specially designed for counter-measures systems.

The saturation output power is about 2 to 3 W, and the gain is at least 50 dB.

This tube has a control grid which permits easy modulation, furthermore, the helix is isolated from ground, which simplifies serrodyne operation.

Periodic permanent magnet focusing reduces size and weight. The tube and magnet are cooled by conduction.
