PHASITRON

DESCRIPTION

The GL-2H21 is a phase-modulator tube for use in FM transmitters. It is intended for operation up to 500 kilocycles. As a modulator tube, the GL-2H21 makes possible the introduction of comparatively

wide-phase excursions at audio-frequency rates in a crystal-controlled, radio-frequency carrier. The modulating circuit audio response is such that the tube has a wide-swing, frequency-modulated output.
