REMARKMicrophony

This tube can be used without special precautions against microphony in A.F. applications in which the input voltage $V_i \geq 5$ mV for an output of 50 mW (or 50 mV for an output 5 W) provided the peak acceleration of the tube is not greater than indicated in the section "Microphony" of the "General Operational Recommendations".

¹⁾ In this case grid current may occur. If this is not permissible, a condition with a bias of -1.5 V should be chosen.
