

BOOSTER DIODE

Booster diode for timebase circuits of colour TV receivers.

HEATING: Indirect by A.C. or D.C.; series supply

Heater current

I_f 300 mA

Heater voltage

V_f 42 V

MECHANICAL DATA

Dimensions in mm

Base: Magnoval

Cap: Type 1

CAPACITANCES

Anode to cathode

C_{ak} 13 pF

Cathode to heater

C_{kf} 3.7 pF

¹⁾ Insertion of a resistor of 300 Ω between pins 3 and 5 is recommended to improve the high-tension properties of the tube. If no resistor is used, pins 3 and 4 should be interconnected.

TYPICAL CHARACTERISTICS

Internal resistance ($I_a = 440$ mA)	R_i	45.5 Ω
---------------------------------------	-------	---------------

LIMITING VALUES (Design centre rating system)

Anode dissipation	W_a	max. 11 W
Anode current, average	I_a	max. 440 mA
peak	I_{ap}	max. 800 mA
Anode voltage, negative peak	$-V_{ap}$	max. 5600 V ¹⁾
negative peak,(absolute max.)	$-V_{ap}$	max. 7000 V ¹⁾
Cathode to heater voltage, peak	V_{kfp}	max. 6300 V ¹⁾

Series resistance heater chain

During operation, the external resistance between either heater pin of the PY500 and either mains terminal should be at least 100 Ω when $V_f/\text{earth} = 220$ V_{RMS}
50 Ω when $V_f/\text{earth} = 110$ V_{RMS}

The hot heater resistances of other tubes in the heater chain can serve for this purpose.

¹⁾ Max. pulse duration 22% of a cycle, but max. 18 μ s.
