

TH 591 TRIODE HYPER - VAPOTRON

The TH 591 is a ceramic metal triode designed for pulse operation at frequency up to 500 MHz. It can deliver 190 kW peak output power into the load. When used with proper cavities, a bandwidth of 12 % can be obtained. The anode cooler of special design (THOMSON patents) can dissipate 60 kW. The corresponding energy is transferred by vaporization and immediate condensation to a distilled water circuit which can be used in a secondary circuit at a temperature of 100 °C.
