

Marconi U14

Full Wave Rectifier

Marconi U14 is a full wave rectifier for use in receivers employing valves such as the PX25, PT25H, etc., in the output stage.

The U14 will provide an output of 500 volts at a current of 120 mA for an input of 500 volts R.M.S.

Price 9/-

Overall Dimensions : 119×41 mm. 4 pin base.

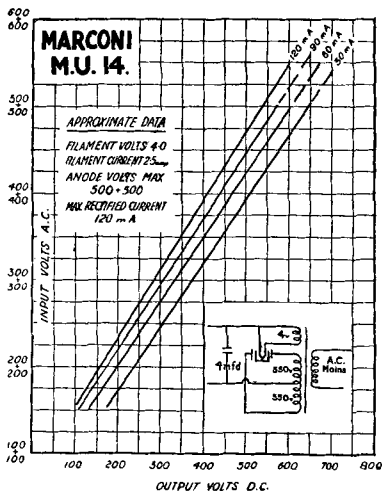

Marconi MUI 4

Full Wave Rectifier

Marconi MU14 is an indirectly heated rectifier having a lower impedance than the UI4. It has recently been redesigned and has a longer heating time, which helps still further to reduce peak voltages on switching. An output of 540 volts at 120 mA is obtainable for an input of 500 volts R.M.S.

The construction is very rigid.

Price 9/-

Overall Dimensions : 125×50 mm. 4 pin base.
